Backend Software Engineer — Building scalable APIs, systems, and real-time services

Experience

Software Development Engineer Intern Aug 2026 – Present

Wyreflow Technologies — Hireshala

- Developed and maintained production features for **Hireshala**, a jobs and internships platform, using **React, Next.js, Node.js, REST APIs, and MongoDB**.
- Engineered authentication workflows using **JWT access tokens, refresh tokens, HTTP-only cookies, and Axios interceptors**, handling token expiration and automatic session renewal.
- Implemented and debugged **authentication, authorization, API error handling, and session management** across frontend and backend services.
- Built and maintained reusable frontend components and data-driven workflows for **job and internship discovery**, applications, and opportunity exploration.
- Optimized production API and frontend behavior by investigating **duplicate requests, authentication failures, stale sessions, routing issues, and API response handling**.
- Worked with **Git-based development workflows, code reviews, CI/CD, production deployments, and SonarCloud quality gates** while collaborating on an actively developed production application.

Founding Engineer May 2025 – Jul 2026

CoolGuide & CoolForums

- Architected and shipped **CoolGuide**, a personalized electronics recommendation platform with **200+ curated products**, using a KNN-based recommendation engine with cosine similarity across product metadata and user preferences.
- Built **CoolForums**, a real-time discussion platform using **Node.js, PostgreSQL, and Socket.IO**, supporting authentication, posts, comments, live chat, and product-specific discussions.
- Designed and deployed production backend services using **Node.js, FastAPI, PostgreSQL, MongoDB, Docker, and Nginx**, integrating APIs, databases, ML services, and real-time communication.
- Owned end-to-end engineering across **system architecture, backend development, authentication, database design, deployment, infrastructure, and production systems**.

Full Stack Developer Intern Oct 2023 – Apr 2024

AICTE IDEALAB, Bhopal, MP

- Engineered a full-stack platform using **Next.js** serving **4,000+ students**, supporting scalable application workflows and data-driven content.
- Implemented secure administrative workflows using **JWT authentication and CSRF protection**, securing sensitive operations against unauthorized access.
- Built dynamic content modules and backend-driven workflows that improved content discoverability and platform usability.

Projects

Backend Framework — Python, TCP Sockets, HTTP GitHub

- Built a lightweight web framework from scratch using **Python TCP sockets**, implementing HTTP request parsing, routing, response generation, and request handling without external frameworks.
- Designed modular **Request and Response abstractions** with an extensible routing architecture inspired by modern backend frameworks.
- Implemented middleware-style processing for **logging, authentication, and rate limiting**, demonstrating core HTTP and backend engineering fundamentals.

SysPilot-AI — Python, Windows API, psutil, Sysinternals GitHub

- Built an AI-ready Windows system inspection tool that collects **process, network, autorun, memory, service, and scheduled-task diagnostics** for automated troubleshooting.

- Implemented system collectors using **Python, Windows API, psutil, and Microsoft Sysinternals**, generating structured system diagnostics and machine-readable reports.
- Generated **human-readable and JSON reports** with LLM-oriented prompts that correlate system diagnostics for AI-assisted troubleshooting.

MPDTECounsel — React, Node.js, Express.js, MongoDB, Docker GitHub

- Built and deployed a data-driven **MP DTE engineering counselling predictor** that received **500+ visits**, analyzing historical cutoff data to recommend probable colleges and branches based on scores, categories, and preferences.
- Developed REST APIs and a personalized prediction workflow that matches student inputs against historical cutoff datasets and filters results based on selection criteria.
- Designed and containerized a **MERN architecture** using React, Node.js, Express.js, MongoDB, and Docker for structured counselling data processing.

Technical Skills

Languages: Python, C++, JavaScript, TypeScript,Bash,Java

Backend: FastAPI, Node.js, Express.js, Flask, Django, REST APIs, WebSockets, JWT

Databases: PostgreSQL, MongoDB, Redis

AI/ML: Scikit-learn, Pandas, LangChain

DevOps & Infrastructure: Docker, GitHub Actions CI/CD, GCP, Nginx, Linux

Frontend: React, Next.js, Tailwind CSS, Zustand

Education

Lakshmi Narain College of Technology Excellence Nov 2022 – Jul 2026

B.Tech. in Computer Science ***(7.34/10 CGPA)*** *Bhopal, Madhya Pradesh*

Relevant Coursework: Data Structures & Algorithms, Database Management Systems, Operating Systems, Computer Networks, Object-Oriented Programming
